

Data Monitoring

The operating system of the JL8000 ensures that the cash handling process is transparent, accountable, and safe. The system tracks a multitude of useful data and information, such as customer ID, date, time, number of notes, split ratio, request for service, etc. It will recognize each banknote's individual serial number, fully decode it and make it available for further database processing.

The intelligent software applications let you track the entire cash handling process in real-time while maintaining the highest security standards. Julong's fully automated cash processing system JL8000 shines in high workload environments, such as cash centers and central banks, where security and efficiency are the highest priorities.

Modular Layout

The JL8000 is a modular layout system that integrated with sorting-and bundling stations, a three-storied conveyance and distribution system, a central PC controlling station, and individual packaging and labeling stations into one work station. It can be worked as a separate work station and an integrated work

Multifunctional Intelligent Cash Processing System

Faster Counting, Safer Moving, Better Circulation

our top priority.

Multifunctional Intelligent Cash Processing System

JL8000 Multifunctional Cash Processing System is an outstanding product in Julong product collection. Clean lines with elegant appearance and human oriented idea highlight the outstanding utility. Delicate design, ideal layout and combination maximize our banknote sorting efficiency. Automatically complete classification and package of ATM, FIT and UNFIT currency, reject the suspect banknote to reject stacker, save human resources, highly improve working efficiency and sorting quality. To monitor the whole process with software system and sort in a closed environment, shows more human care and environment protection. JL8000 is considered as an ideal model in cash processing industry, which will terminate the complicate banknote processing process in cash center.

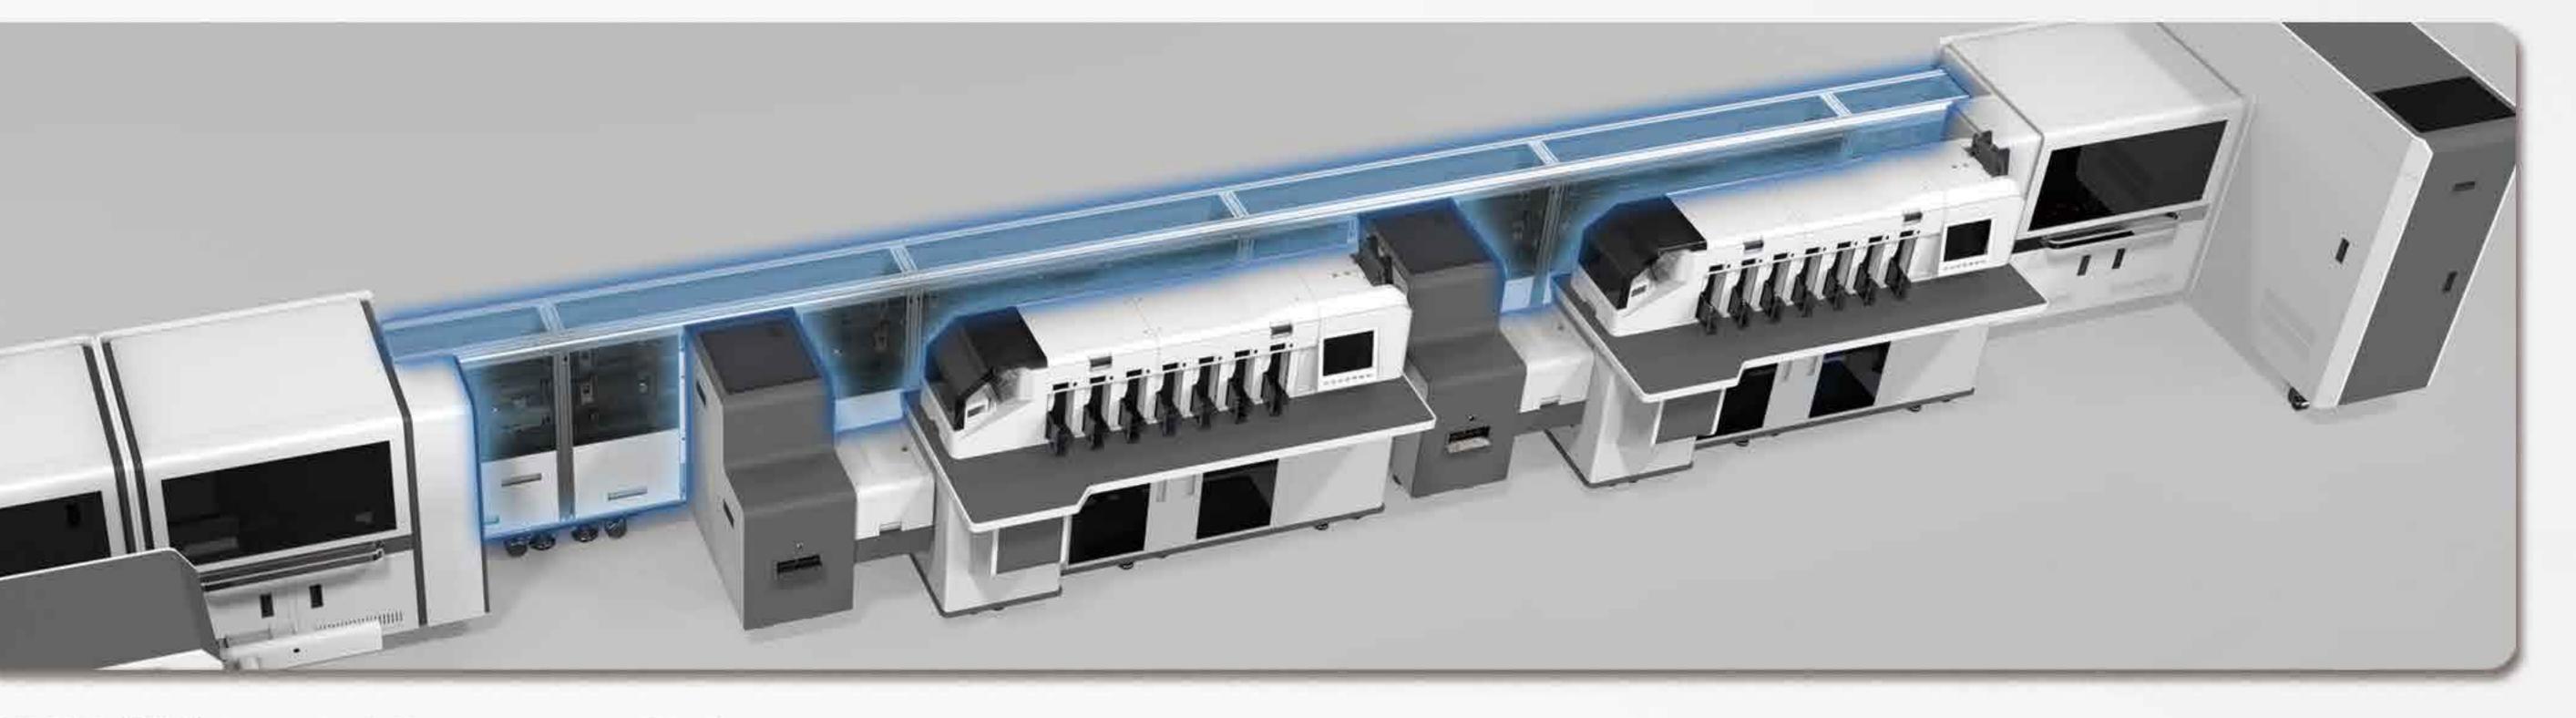

Cash Processing Capacity

Processing capacity for one working station: Basic capacity: 220,000~340,000 notes/day Peak value: 370,000 notes/day Average capacity: 280,000 notes/day One more station, double productivity. One station requires 2 operators, one more operator will be needed if one more station added. N stations require N+1 operators (N=number of stations).

Module Description

With our module layout design, we can customize our JL8000 cash processing system for you based on your special request with one to eight working station and more combination design.

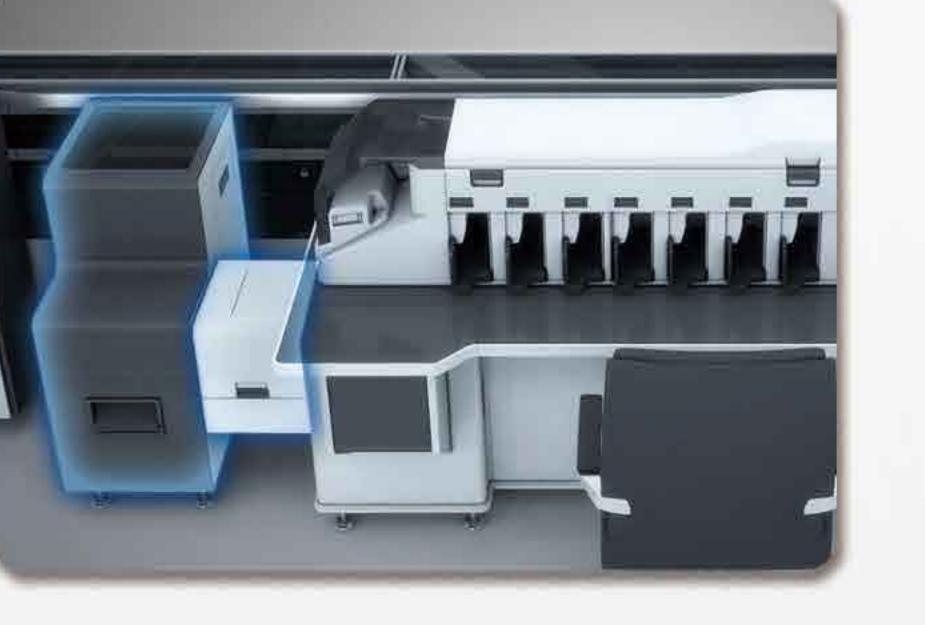

JL8000-55 Integrated Conveyance Station

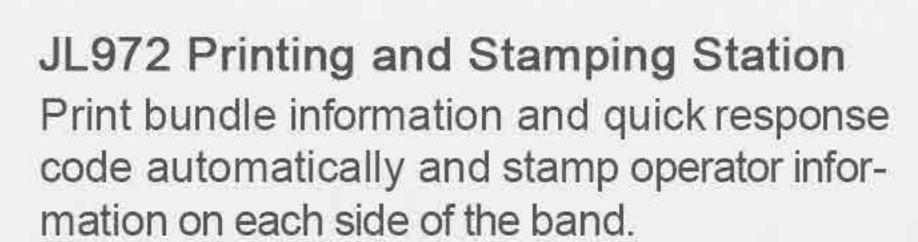

Transport banknote bundles from sorting and binding station to the specified shrink wrapping station or strapping station.

JL8010 Sorting and Binding Station It is able to complete counterfeit identification, automated sorting and bundling. JL8010 is featured with 500notes capacity stacker that enable to automatically push out banknote. It has a dedusting system and 2 configurations (4+1 and 7+1 model).

JL8000-20 Lifting and Distribution Station Change banknote bundle direction, lifting and distribute it to the specified conveyance

JL8030A Shrink Wrapping Station Shrink wrapping 10 banknote bundles

JL 8022 Pre-strapping Station Stack 10 banknote bundles based on

category and change direction of 5 bundles and then transport it to strapping machine.

JL8060 Strapping Station

Strap 10 banknote bundles (1,000notes) with double cross band.

JL8021 Pre-strapping Station

Stack 10 bundles based on category(work station quality and version) and change direction of 5 bundles .Transport banknotes to pre-strapping machine and bind the bundles with transparent band.

JL8000-56 Classification Station Print bundle information and Q&R code classify bundles and transport it to the specified container based on category (including station, quality and version).
